<b>Weights</b>			
<i>NSSE creates weights for randomly selected first-year and senior respondents based on part-time/full-time status, gender, and, in the case of WEIGHT3, institutional enrollment size. Use weights to replicate NSSE benchmark scores, means, and the frequency column percentages. However, we encourage schools interested in intra-institutional weighting to consider a more sophisticated weighting system that takes into account response rate differences among additional student subpopulations. NSSE's weights are not appropriate for intra-institutional comparisons in most cases as the response rate differences among subgroups may not be the same as the ones that exist institution-wide at your school. All three weights below will reproduce your institution's report statistics, but the N's will differ. See NSSE's website for more detailed information about this topic.</i>			
WEIGHT1		Replicates the original number of respondents for each institution and is used to produce means, frequency, and benchmark statistics for each institution.	
WEIGHT2		Multiplies the number of respondents to match the institution's overall population size.
