

# BCSSE 2020 Transfer Student Institutional Report

Illinois State University

**Please note:** The layout of this file is optimized for printing and PDF creation, not on-screen viewing. When the Excel version is viewed on screen, some cells appear to contain truncated text or misplaced line breaks. This is due to differences in Excel between on-screen display and what appears in print or PDF.

# Transfer Student Institutional Report 2020 Student Status Criteria

#### First-year students were recent high school graduates who met one of the following criteria:

- All paper survey respondents regardless of high school graduation year.
- Web respondents who graduated high school in 2020.
- Web respondents who graduated high school in 2019 or 2018 and did not attend another institution since graduating high school.
- Web respondents who graduated high school in 2019 or 2018 and did attend another institution since graduating high school and expects to transfer 11 or fewer credits.

#### Transfer students were those respondents who met the following criteria:

• All web respondents who attended a college or university after graduation from high school, expects to transfer 12 or more credits, and graduated high school prior to the current year.

#### Older students were those respondents who met one of the following criteria:

- Web respondents who graduated high school in 2017 or earlier and did not attend another institution since graduating high school.
- Web respondents who graduated high school in 2017 or earlier and did attend another institution since graduating high school and expects to transfer 11 or fewer credits.

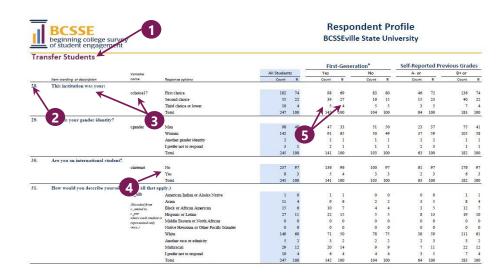

# **BCSSE 2020 Transfer Student Respondent Profile**

# Respondent Profile About This Report

The Respondent Profile presents overall student demographic information, as well as by first-generation status and self-reported previous grades. The display below highlights important details in the report to keep in mind when interpreting your results. For more information please visit our website (bcsse.indiana.edu) or contact your BCSSE Project Services team.

- 1. Student status: As reported by your students.
- Item numbers: Numbering corresponds to the survey facsimile and codebook available on the BCSSE website.
- Item wording and variable names: Survey items are in the same order and wording as they appear on the instrument.
   Variable names are included for easy reference to your data file and codebook.
- Response options: Response options are worded as they appear on the instrument (except where abbreviations are used for formatting purposes).
- 5. Count and column percentage (%): The Count column contains the number of students who selected the corresponding response option. The column percentage is the percentage of students selecting the corresponding response option. Percentages may not sum to 100 due to rounding

# BCSSE 2020 Transfer Student Frequencies and Statistical Comparisons

# Frequencies and Statistical Comparisons About This Report

The Frequencies and Statistical Comparisons report presents item-by-item student responses and statistical comparisons that allow you to examine patterns of similarity and difference between groups students at your institution. The display below highlights important details in the report to keep in mind when interpreting your results. For more information please visit our website (besse.indiana.edu) or contact a member of the BCSSE team.

- 1. Student status: As reported by your students.
- Item numbers: Numbering corresponds to the survey facsimile and codebook available on the BCSSE website.
- Item wording and variable names: Survey items are in the same order and wording as they appear on the instrument.
   Variable names are included for easy reference to your data file and codebook.
- Values and response options: Values are used to calculate means. Response
  options are worded as they appear on the instrument.
- Count and column percentage (%): The Count column contains the number of students who selected the corresponding response option. The column percentage is the percentage of students selecting the corresponding response option. Percentages may not sum to 100 due to rounding.
- 6. Overall mean: Mean scores for each item. Mean item scores by within-campus comparison groups are presented on the right side. Mean calculated from ordered response options (e.g., Very often, Often, Sometimes, Never) assume equal intervals and should be interpreted with caution.
- 7. Statistical comparisons: Items with mean differences that are larger than would be expected by chance are noted with asterisks referring to three significance levels (\*p < .05, \*\*p < .01, \*\*\*p < .001). Significance levels indicate the probability that an observed difference is due to chance. Statistical significance does not guarantee the result is substantive or important. Large sample sizes tend to generate more statistically significant results even though the magnitude of mean differences may be inconsequential. Consult effect sizes (see #8) to judge the practical meaning of differences. Unless otherwise noted, statistical comparisons are two-tailed independent t-tests. Exceptions are items WTD12 which are compared using a z-test.</p>

8. *Effect size:* Effect size indicates practical significance. An effect size of .2 is often considered small, .5 moderate, and .8 large. Effect sizes for independent *t*-tests use Cohen's *d; z*-tests use Cohen's *h*. Cohen's *d* is calculated by dividing the mean difference by the pooled standard deviation. Cohen's *h* is calculated by taking the difference in the proportion of students who selected the item after the proportion has been transformed using a non-linear (arcsine) transformation. See: Cohen, J. (1988). *Statistical power analysis for the behavioral sciences (2nd edition).* New York: Psychology Press.

# **BCSSE 2020 Transfer Student Scale Means**

# **Scale Means About This Report**

BCSSE Scales provide a useful summary of the detailed information contained in your students' BCSSE responses. By combining responses to related BCSSE questions, each scale offers valuable information about a distinct aspect of student engagement.

challenging and supportive environment

- 1. Student status: As reported by your students.
- Scale description and variable name: A brief description of the BCSSE scale along
  with the variable name for easy reference to your datafile and codebook. See Scale
  Descriptions for more information.
- Mean: The unweighted scale mean is reported overall for the institution, as well as by first-generation status and self-reported previous grades.
- 4. Statistical comparisons: Items with mean differences that are larger than would be expected by chance are noted with asterisks referring to three significance levels (\*p < .05, \*\*p < .01, \*\*\*p < .001). Significance levels indicate the probability that an observed difference is due to chance. Statistical significance does not guarantee the result is substantive or important. Large sample sizes tend to generate more statistically significant results even though the magnitude of mean differences may be inconsequential. Consult effect sizes (see #5) to judge the practical meaning of differences. Unless otherwise noted, statistical comparisons are two-tailed independent t-tests</p>

5. *Effect size*: Effect size indicates practical significance. An effect size of .2 is often considered small, .5 moderate, and .8 large. Effect sizes for independent *t*-tests use Cohen's *d*. Cohen's *d* is calculated by dividing the mean difference by the pooled standard deviation. See: Cohen, J. (1988). *Statistical power analysis for the behavioral sciences* (2nd edition). New York: Psychology Press.

#### **BCSSE Scales**

BCSSE Scales scores were calculated by converting the responses for each item to a 0-60 range. A mean scale score was then calculated for each student. Below is a brief description of each scale with the component BCSSE items in parentheses.

| Scale name                                   | Description   | Scale items  |
|--|---|--|
| Quantitative Reasoning<br>(HS_QR)            | High school engagement with analysis and<br>numerical information<br>(First-year students only) | hQRconclud, hQRproblm, hQRevaluat  |
| Learning Strategies<br>(HS_LS)               | Use of effective learning strategies in high school. (First-year students only)                 | hLSreading, hLSnotes, hLSsummry  |
| Learning Strategies<br>(TR_LS)               | Use of effective learning strategies at prior institution (Transfer students only)              | tLSreading, tLSnotes, tLSsummry  |
| Collaborative Learning (EXP_CL)              | Expectation to interact and collaborate with peers  | fyCLaskhlp, fyCLxplain, fyCLstudy, fyCLprojct                                |
| Student-Faculty Interaction<br>(EXP_SFI)     | Expectation to interact and engage with faculty   | fySFcareer, fySFothrwrk, fySFprform, fySFdiscuss                             |
| Discussions with Diverse Others<br>(EXP_DD)  | Expectation to engage in discussions with diverse others  | fyDVrace, fyDVeconome, fyDVreligion, fyDVpolitical                           |
| Academic Perseverance<br>(EXP_PER)           | Student certainty that they will persist in the face of academic adversity                      | cotherint, cfindinfo, ccourdis, caskinst, cfinish, cstaypos                  |
| Academic Difficulty<br>(EXP_DIF)             | Expected academic difficulty during the coming year   | clearnma, cmantime, cgethelp, cintfac  |
| Perceived Academic Preparation<br>(PER_PREP) | Student perception of their academic preparation  | fySGwrite, fySGspeak, fySGthink, fySGanalyze, fySGothers, cgncompt13, cgninq |
| Importance of Campus Environment (IMP CAMP)  | Student-rated importance that the institution provides a challenging and supportive             | fyacadexp, fySEacad, fySEdiv, fySEnacad, fySEsoc,                            |

# **BCSSE 2020 Transfer Student Institutional Report Endnotes**

- a. First generation is defined as no parent or guardian having graduated with a 4-year college degree.
- b. Please refer to BCSSE Scale Descriptions for items included in the scale.
- c. These are the values used to calculate means. For the majority of items, these values match the codes in the data file and codebook. For items estimating number of papers and hours per week, the values represent actual units using the midpoints of response option ranges and an estimate for unbounded options.
- d. Statistical comparison uses z -test to compare the percentage who selected each item against those who did not.
